

MapQuest Geocoding API

Provides:

This API provides the functionality to obtain the latitude and longitude of an address and vice versa

Key Provisioning:

Pain factor (*0=ezipz...5=nightmare*): 

- Must make an account on MapQuest
- When creating a new key, the callback url is optional

Quotas:

- 15,000 free requests per month (total including other APIs on MapQuest)

The Good:

- Has option for batch request
- Has a header for geocode quality code that shows how accurate the location or coordinates obtained are

The Bad:

- Figuring out how to parse the results can be annoying due to layers of objects in lists and lists in objects

The Ugly:

- ...

Location: <https://developer.mapquest.com/documentation/open/geocoding-api/>

Accurate as of 2018-mm-dd
